W

As required in 40 CFR 262.56(a)(5) and 40 CFR 262.87(a)(5), Except for hazardous waste produced by exporters of greater than 100 kg but less than 1000 kg in a calendar month, unless provided pursuant to §262.41 [biennial report], when submitting in even numbered years:

<p>(i) A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated:</p>	<p>Clean Harbors El Dorado, LLC has a waste minimization plan in place. The facility receives fluorescent bulbs, including tubes and miscellaneous shaped. We process these through our lamp recycling unit which separates the mercury from the glass and end caps. The mercury is sent for retort, and the glass and end caps are sent for recycle. Secondly, the facility operates a metal recovery unit where the large metal pieces are removed from the out-going ash and sent for recycle after cleaning. Lastly, empty drums that remain after all liquid is pumped off, are sent to a drum reconditioning facility in AR.</p>
<p>(ii) A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984:</p>	<p>Incineration under RCRA conditions reduces the toxicity and the volume of wastes by as much as 100%, depending on the non-incinerable salts, minerals and metals that the wastes contained. Any toxicity that remains would be from heavy metals that the wastes originally contained. This toxicity is further reduced, as required by 40 CFR Part 268 regulations, by stabilization at approved hazardous waste landfills prior to final landfill.</p>
